Installation instructions

Wiring type and cross section

Stranded wire or solid wire with a cross section up to 2.5 mm^2 may be used for wiring. Strip 8 mm of insulation from the cables to ensure perfect operation of the screw terminals. The lamp cable has to be selected according to the ignition voltage.

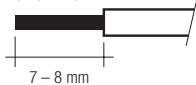

ZRM 2-4.5 ES/C:

wire preparation:
 $0.5 - 2.5 \text{ mm}^2$

ZRM 6-12 ES/C:

wire preparation:
 $0.75 - 2.5 \text{ mm}^2$

When using two wires in one clamp-cage it is recommended to use the same wire types (solid or flexible) and same wire diameters. Above all, it must be made sure that the wires are fastened securely.

Wiring notes

The ignitor can be used in luminaires for Protection Class 1 and Protection Class 2. The maximum allowable torque on the M8 nut is 4 Nm.

ATTENTION!

Terminals which are not fastened sufficient can cause charrings (maximum torque of terminal screws is 0.8 Nm). Wrong wiring can cause the destruction of the ignitor.
