

# Process reliability even under extreme conditions

## Air/Water Heat exchangers from the PWS and PWD series

The use of Pfannenberg air/water heat exchangers is particularly suitable where ambient temperatures are high or the atmosphere proves to be particularly oily or aggressive.

Their main advantages over other air conditioner units for control cabinets are their maintenance-free operation and extremely low noise emission.

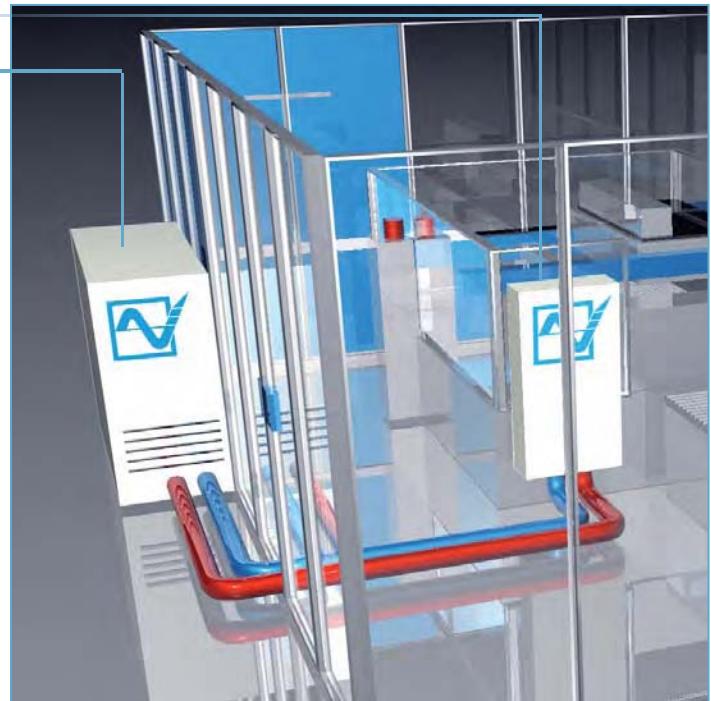

Ideal areas of use for air/water heat exchangers are wherever machines or production processes are cooled by tempered water and water is thus already provided.

## The biggest advantage of water cooling is the 100 % system solution

The combination of air/water heat exchangers and chillers offers an ideal system solution for the cooling of your processes, machines and controllers.

Chillers ensure central, economic cooling and provision of water as the cooling medium. All cooling tasks in a system or machine and also on a control cabinet can be accomplished simply and economically via a closed pipeline system.

## The special product characteristics of the PWS series

### Economy

- system-compatible with chillers
- can be integrated in existing cooling circuits
- integrated thermostat and solenoid valve for energy-efficient temperature control

### Process reliability

- high air flow rate and cooling capacity
- any power losses that occur are not given off into the room
- integrated temperature monitoring with alarm contact

### Resilience

- very high IP protection (up to IP 65)
- usable under aggressive environmental conditions
- independent from the ambient temperature at the place of installation

### Service and mounting-friendliness

- compact design
- seal requires no elaborate reworking of the mounting cut-out
- maintenance-free
