

Solenoid operated directional control valves DG4V-3

- Wet type solenoid valve boasts superior valve life with low switching noise. No seals on sliding surfaces eliminates leakage worries.
- Many valve options including 3 types of wiring connections, indicator lamp, surge suppressor, and AC/DC rectifier.

Directional Control Valves

Model Code

(F3)-DG4V-3-2A(L)-M-P2-T-7-(P08)-54

1 2 3 4 5 6 7 8 9 10 11 12

- 1 Hydraulic fluid
Omit: mineral oil based fluid, water-glycol based fluid
F3: Phosphate ester
- 2 Solenoid operated directional control valve (gasket mounting)
Wet armature type
- 3 Mounting dimensions
3: ISO 4401-03
- 4 Spool type
See page E2-4 to E2-7
- 5 Spool/spring arrangement
A: Spring offset, A type (2 position, single solenoid)
B: Spring offset, B type (2 position, single solenoid)
C: Spring centered type (3 position, double solenoid)
N: No spring detented type (2 position, double solenoid)
- 6 Solenoid assembly configuration (for spring sets, type A and B)
Omit: standard (energized: P to B, A to T)
L: Left hand build (energized: P to A, B to T)
- 7 Electrical wiring system
P: Plug-in solenoids, conduit box, G 1/2
U: DIN43650 connectors, Pg. 11
KU: Flying leads (standard lead wire length 350 mm, DC 12 V, 24 V only)
- 8 Electrical accessories
Omit: no accessories (electrical wiring P, KU) and for no connectors (electrical wiring U)
1: Connectors without accessories (electrical wiring U)
2: With indicator lamp (AC standard)
4: With surge suppressor (electrical wiring KU, slow solenoid deenergize)
7: With indicator lamp and surge suppressor (DC standard)
9: ADC solenoid rectifier (fast solenoid deenergization), indicator lamp and surge suppressor
12: ADC solenoid rectifier (slow solenoid deenergization), indicator lamp and surge suppressor

Table of electrical accessories which can be selected

Electrical Wiring System	Solenoid Power Supply	Electrical Accessories						
		Omitted	1	2	4	7	9	12

	BR	AC110 V 50/60 Hz ↓ DC100 V (coil)			0.29	29			
	VR	AC200 V 50/60 Hz ↓ DC180 V (coil)			0.17	31			

- Note:
- Current values and power consumption varies with temperature conditions. Values shown in table are based on 30°C.
 - In the AC/DC conversion type, AC power is used to activate the DC solenoid by the built-in rectifier, and it comes with the characteristics featured by DC solenoids. This means that the items given for the DC solenoids apply for the maximum flow.
 - Consult Tokyo Keiki for details on solenoids for the supply voltages which are not listed above.

Spool Types (Neutral Position)

Spool Types	Name	Functional Symbol	Spool Configuration Diagram	Functions and Applications
0	Open center			At the neutral position the pump is set to the unload status and the actuator to the floating status. In the case of the 2-position type, all the ports are connected to the tank during the course of switching so shock is reduced.
1	P-A-T connected			The valve is used when, at the neutral position, the pump is to be set to the unload status and the pressure oil is to be sent only in one direction, and the actuator is to be kept shut down.
2	Closed center			At the neutral position the pump pressure is maintained, and the actuator is locked. It must be borne in mind that all the ports are blocked during the course of switching so shock will be generated in the case of the 2-position type.
3	A-T connected			Slight movements in one direction of the actuator caused by leaks from the P port at the neutral position are prevented.
6	A-B-T connected			At the neutral position the pump pressure is maintained, and the actuator is set to the floating status. As is the case with spool type "2," the 2-position type is used when the pump pressure is to be maintained even during the course of switching. Shocks arise during the course of switching as well, but the shocks are less compared with spool type "2."
7	P-A-B connected			At the neutral position a differential circuit can be configured.
8	Tandem			At the neutral position the pump is set to the unload status, and the actuator is locked. A multiple number of the valves can be connected in series for use.
33	A-B-T connected w/restrictors			This type, which is a modified version of spool type "6," was created by adding restrictors between the A → T and B → T ports. The restrictors serve as brakes so when the actuator is to be shut down, it can be shut down faster than is the case with spool type "6."

Characteristics Curve (viscosity 20 mm²/s, specific gravity 0.87) (typical examples)

Pressure Drop Characteristics

- For pressure drops (ΔP_1) of viscosities other than 20 mm²/s, calculate using multiplier coefficients shown in below table.
- The formula to calculate pressure drops (ΔP_1) for specific gravities other than 0.87 is as follows.
 $\Delta P_1 = \Delta P \times G_1 / G$
 ΔPValues according to characteristics curve
 G0.87
 G_1Desired specific gravity value

Viscosity mm ² /s	10	20	30	40	50	60	70	80	90	100	110	120	130	140	150

Switching Times

Power Supply	Operation	De-energize Time	Unit: ms		
			Spring Offset Spring Centered C, B, BL	Spring Offset A, AL	No Spring Detented N
AC	Energize	/	10~15		10~15
	Spring Return		20		
DC	Energize		30		30
	Spring Return		15 * (90)		
AC/DC conversion (with Rectifier)	Energize			30	30
	Spring Return		Fast	20	
		Slow	90		

Conditions: No. 2 spool, open loop circuit, flow 40 L/min., supply pressure 17.5 MPa, fluid viscosity 20 mm²/s

[Circuit Example]

[Switching Time Definition]

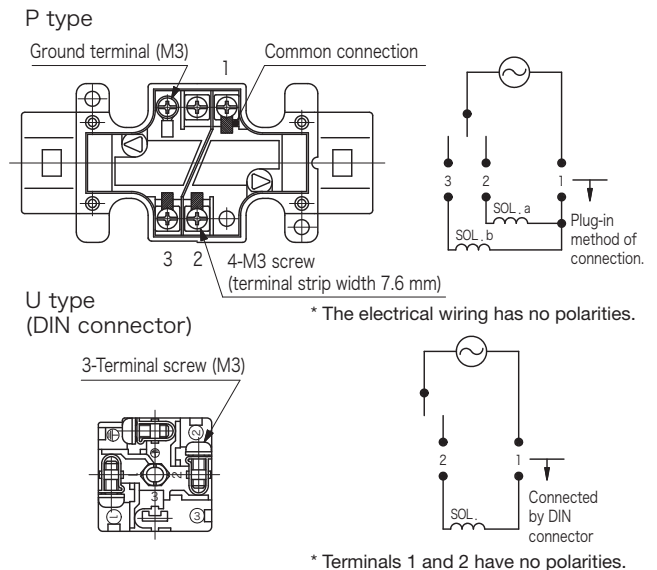

Note: • Values shown may vary according to spool type and circuit conditions.
 • * Indicates KU4 coil.

Notes on Operation

- **Mounting orientation**
To ensure sure switching of no spring detented type valves, mount valves so spool axis is horizontal. There are no mounting attitude restrictions for other spool/spring arrangements.
- **Solenoid energization**
Always ensure that one side of solenoid is deenergized before energizing the opposite side. For spring centered and spring offset valves, solenoid should be continuously energized during circuit switching. Deenergization of solenoid will cause spool to return to prescribed position by spring force. For no spring detented type valves, spool will be maintained in switched position by the detent but to ensure sure circuit switching, solenoid should be energized for more than 0.1 second.
- **T (tank) port piping**
Prevent abnormal pressure surges above the allowable back pressure rating from being generated in T port. Valve is wet armature type so ensure that valve is always filled with oil.
- **Using valves as two-way and three-way**
Valve is designed as four-way and max. flow is limited when using as two or three-way valves. Consult Tokyo Keiki for details.
- **Long periods of solenoid energization**
Care should be paid as long periods of solenoid energization at high pressure may cause spool sticking and switching malfunction.
- **Malfunctions due to surge pressure**
Avoid combining flows of tank lines prone to surge pressures. Surge pressures in T port may lead to spool malfunctions. No spring detented type valves are susceptible to such malfunctions during deenergization.
- **Manual operation**
For manual switching, push the manual override pin. Be aware that actuation force increases with higher back pressure. (See graph)

- **Solenoid indicator lamp**
For valves with indicator lamps, the lamps will light when current flows to the solenoid.
- **Electrical wiring**
Solenoid and conduit box are pre-wired. Refer to below diagrams for wiring from power source to conduit box and DIN connectors.

Mounting Bolts (JIS B 1176, Strength Class 12.9)

Hex Socket Bolts	Qty
M5 × 50	4

- Mounting bolts must be ordered separately.
- Tightening torque of mounting bolts: 7 to 8 N•m

● Mounting dimensions

Subplate

Subplate		Connection Port Dia. Rc
Side Piping	DGMS-3-1E-10-T-JA-J	3/8
Bottom Piping	DGVM-3-10-T-JA-J	

- Subplate and bolts must be ordered separately.
- See page R6-6 for dimensions.
- See page R6-6 for plural mount subplates.
- Max. working pressure is 21 MPa. For higher pressures, valve should be mounted on manifold block.

● Mounting surface machining accuracy

Surface Roughness	1.6 μm Ra	
Flatness	Less than 0.01 (□ per 100 mm)	0.01 / □100
Permissible Tolerance	Mounting bolt hole: ±0.1 Ports: ±0.2	

Dimensions

● AC solenoid

Spring Offset DG4V-3-*A/B-M-P* (solid line)

Spring Offset DG4V-3-*AL/BL-M-P* (dashed line)

Spring Centered DG4V-3-*C-M-P*

No Spring Detented DG4V-3-*N-M-P*

DG4V-3-*C/N-M-U*

Dimensions

● DC solenoid

Spring Offset DG4V-3-*A/B-M-P* (solid line)

Spring Offset DG4V-3-*AL/BL-M-P* (dashed line)

Spring Centered DG4V-3-*C-M-P*

No Spring Detented DG4V-3-*N-M-P*

DG4V-3-*C/N-M-U*

DG4V-3-*C/N-M-KU*

DIN43650 connector

Wiring connection port Pg.11

Applicable cable diameter ø6 to 9
